SUMMARY

Highly skilled Kafka developer with extensive experience in Confluent Kafka and Confluent Cloud with adequate experience on Monitoring tools and with moderate experience on gitlab, kubernetes and AWS. Seeking to leverage expertise further in Kubernetes and monitoring solutions to drive operational efficiency, improve system reliability, and enhance scalability in fast-paced environments.

EXPERIENCE

October 2021 - Current

Senior Specialist - Software Engineering, LTI Mindtree, TN

Senior Software Developer (Confluent/Confluent Cloud) - SCANIA Project:

- Created Kafka Topics, Partition assignment, RBAC, consumer group configs and code template for Kafka Producers and Consumers, Implemented Confluent Schema Registry and Streams creation Confluent KSQL.
- Integrated Confluent Kafka with enterprise data systems including data lakes, databases, and analytics platforms, to facilitate seamless data ingestion, processing, and storage.
- Managed Confluent Kafka clusters on-premise and in cloud environments through Kubernetes.
- Developed and maintained Confluent Kafka Source and Sink connectors for various data sources and Kafka for real-time data streaming on different connectors like JDBC Source and Sink, Snowflake connector, IBM MQ connector, Oracle CDC source, S3 Sink connectors and Celonis EMS Sink connector.
- Deployed custom connector image using docker for Celonis EMS sink connector for data processing.
- Created and optimized KSQL queries to perform real-time data transformations, filters and created Streams in KSQL to convert JSON to AVRO and vice versa..
- Implemented end-to-end monitoring solutions for Kafka clusters and associated components (e.g., Kafka Connect, KSQL DB) using Datadog and the ELK Stack to ensure performance, reliability, and health of the streaming infrastructure.
- Created custom Datadog dashboards and alerts to monitor Kafka and its ecosystem, including producers, consumers, and connectors
- Worked on Confluent cloud infra and implemented topic creation, partition assignment, consumer group configuration and RBAC
- Created Flink queries for migrating existing KSQL streams on Confluent platform to Flink jobs on Confluent cloud

January 2016 - January 2025

IT Analyst, Tata Consultancy Services, TN

- Worked as a developer for the USAA Client on Developing and maintaining Java-based applications on frameworks such as Java Swing, Spring Boot.
- Designed and implemented RESTful APIs on microservices and external applications.

- Configured and optimized Maven and Gradle build scripts to manage Java projects, including defining tasks, building artifacts, and unit testing and deployment pipelines.
- Worked with relational databases, utilizing basic SQL to write queries for data select, insertion, and updates
- Integrated Splunk for monitoring and log management, setting up Splunk alerts to notify stakeholders of critical system events, performance issues, or anomalies in real-time.
- Developed and maintained custom Splunk dashboards for visualizing key metrics from Java applications and Kafka systems, allowing teams to monitor application health, transaction rates, and system performance.
- Created Java based Producers and Consumers for data streaming on Apache Kafka

EDUCATION

June 2015

Electrical And Electronics Engineering

Sona College Of Technology

INTERESTS

Cricket, Chess and Music
