

SANGEETHA SASIKUMAR

New York, NY | Phone: 347- 409 - 7669 | sangeekumar7@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

Data Engineer experienced in predictive modeling, analyzing structured and unstructured data, and developing scalable pipelines. Leveraging a strong background in software engineering, I bridge the gap between technical execution and business strategy.

EDUCATION

CodePath-AI Engineering Training

February 2026-May 2026

CUNY School of Professional Studies (**MS**, Data Science), GPA 3.96

December 2025

Brooklyn College, (**BS**, Computer Science, Minor in Physics)

December 2017

TECHNICAL SKILLS

Languages: Python (Jupyter Notebooks, Google Colab), R, SQL, HTML, Java

Technologies: Tableau, PowerBI, Oracle, MySQL, PyTorch, TensorFlow, scikit-learn, AWS, GCP, Spark, Docker

Machine Learning: Regression, Classification, XGBoost, Random Forest, Neural Networks, LLM, NLP, Langchain

AI Tools: ChatGPT, Claude, GitHub Copilot, Gemini

WORK EXPERIENCE

Data Science/ML-Freelance

June 2025-December 2025

Opportunity Hack (Non Profit)

Remote

- Developed an AI agent with Google Drive using Python, Langchain and RAG to assist in unstructured document organization, tagging, and retrieval for a non-profit organization. Implemented AI-driven document categorization and suggested reorganization strategies for enhanced prompting capabilities.
- Created a prototype and wrote the foundations for a predictive analytics/forecasting geospatial tool. Used Javascript, Google AI Studio and Cloudflare for development.

Software Engineer-Data Analytics

November 2020-July 2023

Verizon

New York, NY

- Collaborated with cross-functional teams in an Agile environment to capture business requirements and deliver a Tableau dashboard that provided application support and enhanced operational efficiency by 28%.
- Developed automated data pipelines using Python and Selenium, performing exploratory data analysis (EDA) on structured application data to identify bottlenecks and reduce manual tasks by 45%.
- Created the front-end (UX) for a Verizon web application from using HTML, CSS, Angular, and Java to connect to the backend, ensuring alignment with company branding guidelines, including colors, fonts, images, and icons.
- Maintained and queried historical application datasets using advanced SQL, ensuring data integrity for downstream reporting and analytics.
- Ensured quality standards by documenting processes, and collaborated with cross-functional teams to support audit-readiness and reliable reporting.

Associate SQL Developer

June 2019-May 2020

Infosys

Hartford, CT

- Led data migration and quality assurance using SSIS for the Medicaid team, automating workflows for 1000+ batch files and ensuring data integrity for healthcare reporting.
- Optimized stored procedures, aligning production and QA servers using SQL to improve efficiency by 10%.

Data Scientist Intern

January 2018-May 2018

SiriusXM

New York, NY

- Analyzed product usage and provided recommendations which improved services by 5% through data visualizations and clustering techniques using R and SQL.
- Processed large datasets using Apache Spark and Apache Drill for marketing department requests. Stored results in HDFS.

DATA PROJECTS

- **Civic Complaints Analytics Dashboard**: Engineered an automated end to end data pipeline prototype to ingest NYS civic complaints data, cleaning and transforming raw logs for analytical readiness. **Tools Used**: Python, Pandas, Plotly, Streamlit, Spark, PyTorch, HuggingFace Transformers
- **Student Grades Prediction**: Built an end-to-end machine learning pipeline to predict student exam scores using academic, behavioral, and demographic features. Optimized Linear Regression model with a Neural Network. **Tools Used**: Python, Neural Network, Linear Regression, scikit-learn, Docker
- **Vinyl Vibes: RAG Music Recommender**: Engineered a RAG recommendation system which suggests songs to the user based on their mood. Tools Used: Python, RAG, LLM (Gemini), Streamlit
